Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The library is from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence may not represent the entire insert of this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The clone sequenced to the left is RP1-42M2. Actual start of this clone is at base position 1 of RP4-810B6; actual end is at 152927
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      63108,

* NOTE: This is a 'working draft' sequence. It currently consists of 26 contigs. The true order of the pieces is not know and their order in this sequence record is arbitrary. Gags between the contigs are represented as truns of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

This invention relates to the DNA and protein sequences of novel isolated human proteases (PRTS). The protein sequences of the invention are useful for screening a compound for effectiveness as an agonist or antagonist of its activity, the identified agonist and antagonist are useful for treating a disease or condition associated with decreased or coverexpression of functional PRTS in a patient. The PRTS protein is also useful as an immunogen for preparing polyclonal or monoclonal antibodies by hybridoma technology. An antibody that binds the PRTS protein is also useful for detection and purification of the proteins and can be used to disgnose a condition or disease associated with expression of PRTS in a subject or in a biological sample. The sequences of the invention are useful for diagnosis, treatment and prevention of gastrointestinal disorders such as gastritis, ulcerative collitis, Reye's syndrome, etc; cardiovascular such as therosclerosis, hypertension, myocardial candificative disorders such as the colliferative disorders such as cushing's syndrome; epithelial disorders such as cushing's syndrome; epithelial disorders such as dermatitis, scabbes, eczema, etc; neurological disorders such as cushing sorders such as infertility.

Candiple sclerosis, etc; or reproductive disorders such as infertility, perms of the present sequence represents the cDNA encoding the human perms?

Sequence and an oligonucleotide comprising a sequence complementary to a polymucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises a 1'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence, 1s selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polymucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by CDNAs easily without any specialised methods. AAH13166 to AAH31628 and AAH31831 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13622 to AAB95893 represent human amino acid sequences; and AAH13622 to AAB95893 conties.
The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 mucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 mucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the compriser strand of a polynucleotide which comprises a 5'-end

2285 2345 The present sequence is the coding sequence for human ubiquitin protease 23431. The ubiquitin rotease coding sequence and protein are useful as reagents or targets in sasays for treatment and diagnosis of ubiquitin-mediated or related cisorders, especially disorders mediated by deubiquitinating enzymes. The protein and coding sequence are also useful for treating disorders involving the following: the spleen e.g. tuberculosis and typhoid fever, the lung such as bronchial asthma, colon e.g. as diarrhoea and dyseatery, the liver e.g. jaundice and cholestasis, the uterus and endometrium e.g. endometritis, the brain e.g. 2340 New human ubiquitin protease, a member of the mammalian deubiquitinating enzymes is useful for diagnosis and treatment of e.g. tuberculosis and antiasthmatic; antiinflammatory; antidiarrhoeic; hepatotropic; gynaecological; cytostatic; antimicrobial; neuroprotective; anti-HIV; immunosuppressive; cardiant; antianaemic; nephrotropic; antibacterial; anti-thyroid; gastroincestinal; ss. GACCTTCAGGCTTAGCAACAAACTGAAAGGCTCGACGGATGAAATGAGTGCACCTGGAGC AGAGAGGGCCTCCCGAGGACCGCGACGCCGCGAGCCTCAGCCTGGCAGCCCGCCGCCGA ubiquitin protease; deubiquitinating enzyme; tuberculostatic; /product= "Human ubiquitin protease"

The invention relates to a new isolated nucleic acid molecule encoding one of 6 polypeptides (ubiquitin protease, lipase, Dynamin, short chain action of 6 polypeptides (ubiquitin protease, lipase, Dynamin, short chain containing the with thrombospondin (TS) domains) and gamma butyrobetaine-hydroxylase (with thrombospondin (TS) domains) and gamma butyrobetaine-hydroxylase containing the nucleic acids, an antibody that selectively binds to the polypeptide a method for producing the polypeptide, a method for progucing the polypeptide, a method for method for producing the polypeptide, a method for compound that binds to the polypeptide and method for compound that binds to the polypeptide and method for the nucleic acid in a sample, a method for compound that modulates the activity of the polypeptide and method for identifying a compound that binds to the polypeptide and method for programs a composition for diagnosing or treating disease e.g. spleen disorders (e.g. splenomegaly and Hodgkin's disease), upg disorders (e.g. adult respiratory distress syndrome, pulmonary oedema, chronic bronditis and emphysema), colon disorders (e.g. adult respiratory distress syndrome, pulmonary oedema, chronic bronditis and emphysema), colon disorders (e.g. adulticesse), uterine and endometrial disorders (e.g. splenomegaly and Hodgkin's disease), uterine and endometrial disorders (e.g. endometriosis and compousal changes), brain disorders (e.g. encopalatitis, Alzaeimer's disorders (e.g. activities and lagorders (e.g. encopalatitis, Alzaeimer's colon vessel disorders (e.g. atherosclerosis, thrombophlebitis and lood vessel disorders (e.g. uricaria, demantitis and lugue erythematosus), theart disorders (e.g. polycystic kidney disorders (e.g. placorders (e.g. mastitis), testicular disease and disorders (e.g. mastitis), testicular disorders (e.g. mastitis), testicular disorders (e.g. mastitis), testicular disorders (e.g. mastitis), as well as tumours and cancdoming disorders (e.g. whipple disease) as well as tumours and cancdoming conte

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cellimaging, broliferative diseases (Parkinson's proliferative diseases (Parkinson's proliferative diseases (Parkinson's proliferative diseases)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               or Alzheimer's disease), autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, platelet or coaquiation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABL39691 to ABL39818 represent novel human nucleic acid sequences encoding the proteins given in ABB06037 to ABB06164. The novel sequences (NS) can have cytostatic, osteopathic, gynaecological, neuroprotective, vasotropic, antiarthritic, antipsoriatic, ophthalmological, virucide, anorectic, muscular, anti-HIV, antiinfiammatory, dermatological, virucide, anorectic, muscular, anti-HIV, antiinferrility, cardiovascular, anticoaqulant, antifibrinolytic, hypotension, antiasthmatic, cardiant, immunomodulator, anticorvulsant, antidabetic, tranquilliser, antiulcer, autidepressant, gastrointestinal, aeuroleptic, cerebroprotective, antidepressant, gastrointestinal, aeuroleptic, cerebroprotective, open therapy and antisense therapy. Nucleic acids, expression vectors and diagnosing e.g. cancer, osteoporosis, endometriosis, degenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                rheumatoid archiritis; cataract; restenosis; atherosclerosis; glaucoma; inflammation; skin disorder; obesity; muscular dystrophy; AIDS; infertility; cardiovascular disease; coagulation disease; hypertension; ischaemia; asthma; immune disease; epilepsy; angina; neurodegeneration; diabetes; anxiety; depression; schizophrenia; viral disease; stroke;

                                                                  g
                                                  AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

c amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)

c activity, and can be used in gene therapy and vaccine production. (I)

creatment of diseases associated with inappropriate (I) expression. For

c treatment of diseases associated with inappropriate (I) expression. For

c example, they may be used to treat disorders associated with decreased

c expression by rectifying mutations or deletions in a patient's genome

cc expression by rectifying mutations of (I). Additionally, (I)

c supplement the patients own production of (I). Additionally, (I)

couply nucleotides may be used to produce the secreted (I), by inserting the

cc polynucleotides may be used to produce the secreted (I), by inserting the

cc protein. (I) proteins and polynucleotides may be used to prevent,

diagnose and treat immune/haematopoietic-derived cells. AAK64703

cc cancers and cancer metastases of haematopoietic antigen genomic

to AAK87694 represent human immune/haematopoietic antigen genomic

crepresent sequences used in the exemplification of the present invention

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91221. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased cypression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to polymucleotides may be used to produce the secreted (I). By inserting the colymucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polymucleotides may be used to prevent. (C diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK84950 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1435 CAGCTTCCCTCTCACATGATAAAGAATCCACTCACTTAAATGGGACTGGACCATTGAAA

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 34611; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations of sociated with decreased expression by rectifying mutations of (I). Additionally, (I) that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein and polynucleotides may be used to prevent, cdiagnose and treat immune/haematopoietic-derived cells. AAK64703 cancers and cancer metastases of haematopoietic antigen genomic
